Tuesday, May 21, 2013
6:00 – 7:30 p.m.
Location: Blue Loon (2999 Parks Highway)
Speaker:
Gene Therriault
Deputy Director of Statewide Energy Planning and Policy, Alaska Energy Authority

The Interior Energy Plan was introduced by Governor Parnell to provide a catalyst to bring natural gas to the Fairbanks area in order to lower the region’s high heating costs. Senate Bill 23 passed the Alaska Legislature unanimously in April 2013 and authorizes the Alaska Industrial Export Authority (AIDEA) to provide the financing package to partner with the private sector to build a liquefied natural gas (LNG) liquefaction plant on the North Slope and a distribution system in downtown Fairbanks and North Pole. Gene Therriault, Alaska Energy Authority deputy director of statewide energy planning and policy, will provide an overview of the project and discuss next steps.

Join ACEP at 6:00 pm on May 21st at the Blue Loon for what is sure to be a great talk on the Interior Energy Plan and how it will affect central Alaska.
